                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                growth factors and cytokines, cell interaction with plasma lipoproteins, cellular susceptibility to viral, protozoal and bacterial infections or disintegration of neurodegenerative plaques. Heparanase may be useful for conditions such as wound healing, angiogenesis, restenosis, athersclerosis, inflammation, neurodegenerative diseases, and viral infections. Mammalian heparanase can be used to neutralize plasma heparin, and anti-heparanase antibodies may be applied for immunodetection and diagnosis of micrometastases, and uncommune lesions, and renal failure in biopsy specimens, plasma samples, and body fluids. PCR primers AAX35646-47 were used to amplify hp3 cDNA, in the course of the invention.
New polynucleotides encoding useful in wound healing and i

The present PCR primer was used to amplify a human cDNA sequence, CC which encoded a protein with heparanase catalytic activity. The CC heparanase (hpa) polymucleotide is useful in gene therapy, particularly CC in treating tumour, inflammation or autoimmunity. Particularly, the CC polymucleotide is useful in modulating the bioavailability of polymucleotide is useful in modulating the bioavailability of the parin-binding growth factors, cellular responses to heparin-binding CC growth factors (e.g. bFGF) and cytokines (e.g. interleukin (IL)-8), CC cell interaction with plasma lipoproteins, cellular susceptibility to CC cell interaction with plasma lipoproteins, cellular susceptibility to CC disintegration of neurodegenerative plaques. The polymucleotide is CC also useful in wound healing (e.g. thermal, chemical or radiation burns), and in the treatment of angiogenesis, restenosis, atherosclerosis, inflammation, neurodegenerative diseases (Gerstmann-Straussler Syndrome or Creutzfeldt-Jakob disease), and some viral, bacterial or protozoa

New polynucleotides encoding a polypeptide having heparanase activity useful in wound healing and in gene therapy, particularly in treating tumour, inflammation, autoimmunity, neurodegenerative diseases

Disclosure; Page 45; 152pp; English

The present PCR primer was used to amplify a human cDNA sequence which encoded a protein with heparanase catalytic activity. The

Particularly, the polynucleotide is useful in modulating the bioavailability of heparin-binding growth factors, cellular responses to heparin-binding growth factors (e.g. bFGF) and cytokines (e.g. interleukin (IL)-8), cell interaction with plasma lipoproteins, cellular susceptibility to certain viral and some bacterial and protozoa infections, or disintegration of neurodegenerative plaques. The polynucleotide is also useful in wound healing (e.g. thermal, chemical or radiation burns), and in the treatment of angiogenesis, restenosis, atherosclerosis, inflammation, neurodegenerative diseases (Gerstmann-Straussler Syndrome
The present invention describes heparanase-specific molecular probes, useful for methods of detecting heparanase in situ. The probes and anti-heparanase antibodies are used to detect or quantify the expression of heparanase, for diagnosis and monitoring of diseases (especially metastasis), for treatment of heparanase-associated diseases (e.g. tumours, (adeno)carcinoma, squamous cell carcinoma, teratocarcinoma, mesothelioma, melanoma, lymphoma or leukemia, a solid cancer (or its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         metastasis; adenocarcinoma; squamous cell carcinoma; teratocarcinoma; mesothelioma; melanoma; lymphoma; leukemia; cancer; sepsis; diabetes;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cervix, colon, skin, intestine, stomach, uterus and pancreas, kidney disease, diabetes and inflammation, nemourhagic nephritis, nephrot syndrome, sepsis and inflammatory or autoimmune disease), for targedrug delivery (e.g. of anticancer agents) and as research reagents. The present sequence represents a PCR primer for human heparanase,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          metastases) derived from liver, prostate, cervix, colon, skin, intestine, stomach,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 23
                      The invention relates to an isolated avian and reptile nucleic acid, encoding a polypeptide with heparanase catalytic activity. The signal peptide of the nucleic acid can be used to express membrane-associated
                                                                                                                                                                                    Nucleic acid encoding avian and reptile heparanase polypeptide i useful to treat various heparin-related disorders and the signal peptide is useful in production of membrane-targeted or secreted recombinant recombination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Synthetic.

                     This sequence encodes the human pre-proheparanase of the invention. This sequence was isolated from human platelets. The heparanase can be used for identifying agents which alter heparanase activity. The heparanase can be used for wound healing or for blocking angiogenesis or inflammation. It can be used for treating e.g. psoriasis, diabetic retinopathy or solid tumours, or for the degradation of heparin and the neutralisation of heparin's anticoagulant properties during surgery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polypeptides can be used to prevent tumour angiogenesis, metastasis and invasion, and to intervene with pathologies associated with impaired heparin-binding growth factors, cellular responses to heparin-binding growth factors, cellular responses to heparin-binding growth factors and cytokines, cell interaction with plasma lipoproteins, cellular susceptibility to viral, protozoa and bacterial infections or disintegration of neurodegenerative plaques. The present sequence represents a chicken signal peptide/human heparanase chimeric cDNA
                                                                                                                                                                                                                                                                                                                           New isolated platelet heparanase products for, e.g. wound healing

                 complementary to a sequence of ribonucleic acid encoding a heparanase. The oligonucleotide hybridises with the ribonucleic acid under conditions of high stringency and has a sequence comprising 10-40 bp. The internucleoside linkages of the oligonucleotide comprise at least one phosphorothioate linkage. Hybridisation of the oligonucleotide to the ribonucleic acid inhibits expression of the heparanase, where inhibition of heparanase means at least a 50% reduction in the quality of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            atherosclerosis, tumour growth and progression, fibroproliferative disorders, and central nervous system (CNS) and neurodegenerative diseases. The products can also be used for detection and diagnosis. The purified heparanase, both recombinantly produced human heparanase and heparanase isolated from human platelet activity, allows for the convenient selection of compounds having anti-heparanase activity, i.e. inhibitors of heparanase activity by measuring inhibition of heparanase activity. Inhibition of heparanase activity can be measured by blocking heparanase-mediated release of radioactive fragments from in vivo radiolabelled (HSPG)/heparin.
                                                                                                                                                                                                                                            New oligonucleotide having a sequence complementary to a sequence ribonucleic acid encoding a heparanase, useful for preparing a composition for treating tumor -

The invention relates to nucleic acid sequences that encode heparanase enzymes having endoglucuronidase activity. Recombinant heparanases are capable of removing the HS side chain from heparan sulfate proteoglycan (HSPG). Sulfated oligosaccharides, sulphonates or HSPG can be used to inhibit heparanase, this is useful for treatment of a physiological or medical condition associated with elevated heparanase activity, such as metastasis, angiogenesis, wound healing, angioplasty-induced restenosis, arteriosclerosis, atherosclerosis and inflammation. The human, murine and rat heparanases can be used to enhance wound healing, especially associated with tissue development and repair. The conditions mentioned above can be diagnosed using specific antibodies, and also using primers and probes specific for the heparanase polynucleotides. Other uses of the heparanases include sequencing sulfated molecules such as HSPG. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    heparanase in a cell; (2) a composition comprising the above oligonuclectide in an amount effective to inhibit, the expression of heparanase in the cell and a carrier; and (3) a method of treating a tumour in a subject comprises administering to the subject an amount of the above oligonucleotide effective to inhibit expression of a heparanase in the subject. Heparanase antisense oligonucleotides have cytostatic activity, can be used in gene therapy, and can be used for preparing a composition for treating tumours. The present sequence encodes human heparanase, which is given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      arteriosclerosis; atherosclerosis; inflammation; tissue development; human; HSPG; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Heparanase; endoglucuronidase; heparan sulfate proteoglycan; enzyme; metastasis; angiogenesis; wound healing; angioplasty-induced restenosis;

                                                                                                                                                                                                                      The specification describes a polypeptide having heparanase (hpa) activity. The recombinant protein is used as a modulator of heparin-binding growth factors, cellular responses to heparin-binding growth factors and cytokines, cell interaction with plasma lipoproteins, cellular susceptibility to viral, protozoal and bacterial infections or disintegration of neurodegenerative plaques. Heparanase may be useful for conditions such as wound healing, angiogenesis, resteenosis, athersclerosis, inflammation, neurodegenerative diseases, and viral infections. Mammalian heparanase can be used to neutralize plasma becomes and spatial for the protocol of the protocol of the policy of the protocol of the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       present sequence represents a DNA encoding human heparanase.

                                             The present sequence encodes a human protein with heparanase catalytic activity. The heparanase (hpa) polynucleotide is useful in gene therapy, particularly in treating tumour, inflammation or autoimmunity. Particularly, the polynucleotide is useful in modulating the bioavailability of heparin-binding growth factors, cellular responses to heparin-binding growth factors (e.g. bfg) and cytokines (e.g. interleukin (II)-8), cell interaction with plasma lipoproteins, cellular susceptibility to certain viral and some bacterial and protozoa infections, or disintegration of neurodegenerative plaques. The polynucleotide is also useful in wound healing (e.g. thermal, chemical or radiation burns), and in the treatment of angiogenesis, restenosis, atherosclerosis, inflammation, neurodegenerative diseases (Gerstmann-Strausseler Syndrome or Creutzfeldt-Jakob disease), and some viral,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (INSI-)

                  The present invention describes genetically modified cells (A) containing a polynucleotide (I) that encodes a polypeptide with heparanase activity, and express recombinant heparanase (II). Heparanase cleaves heparan sulphate (HS) at specific intrachain sites, resulting in release of heparin-binding growth factors, enzymes and proteins that are sequestered by HS in basement membranes, extracellular matrix or cell surfaces. It may also be implicated in tumour angiogenesis and metastases. (II) is potentially useful in wound healing and for treating angiogenesis, restenosis, atherosclerosis, inflammation, neurodegeneration, viral infection and cystic fibrosis. It can also be used to neutralise heparin (an alternative to protamine) and to screen for specific inhibitors (potentially useful for treating cancer and metastases). Antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; heparanase; hpa; genetic modification; expression; anticancer; angiogenesis; anti-angiogenic; antiproliferative; antiviral; antitumour anti-atherosclerotic; anti-inflammatory; antineurodegeneration; heparan sulphate; heparin-binding growth factor; tumour angiogenesis; metastasis; wound healing; restenosis; atherosclerosis; inflammation; neurodegeneration, viral infection; cystic fibrosis; cancer; diagnosis; micrometastasis; autoimmune lesion; kidney failure; ss.

                                                                                                                                             The present invention describes heparanase-specific molecular probes, useful for methods of detecting heparanase in situ. The probes and anti-heparanase antibodies are used to detect or quantify the expression of heparanase, for diagnosis and monitoring of diseases (especially metastasis), for treatment of heparanase-associated diseases (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antidiabetic; immunomodulatory; anti-inflammatory; nephrotropic; metastasis; adenocarcinoma; squamous cell carcinoma; teratocarcinoma; mesothelioma; melanoma; lymphoma; leukemia; cancer; sepsis; diabetes; inflammation; haemorrhagic nephritis; nephrotic syndrome; autoimmune disease; anticancer; kidney disease; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence encodes human hepara exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     drug delivery (e.g. of anticancer agents) and as research reagents.
                                                                                                                      This sequence represents a human heparanase coding sequence clone, isolated from an EST clone. The invention relates to heparanase DNA and protein sequences. The heparanase DNA and protein sequences are useful in wound healing, angiogenesis, restenosis, atherosclerosis, inflammation, pulmonary diseases, neurodegenerative diseases (such as Scrape, Alzheimer's diseases, and Creutzfeldt-Jakob diseases) or viral infections. The heparanase coding sequence is particularly useful in confections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAA91112 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  atherosclerosis; inflammation; pulmonary disease; Alzheimer's disease; neurodegenerative disease; Creutzfeldt-Jakob disease; viral infection; gene therapy; mouse; expressed sequence tag; ds.

                                                                                                                                     CC AAB8317 - AAF9295 and AAF62232 - AAF62235 which are used to isolate the CC cDNA sequences of the invention. The invention also includes methods for the production of antibodies directed against the proteins, and cDNA sequences, which can be used in vaccines. The polynucleotide sequences can be used in gene therapy. The polynucleotide sequences and the groteins they encode may be used in the prevention, treatment and cC diagnosis of diseases associated with inappropriate secretory convetein/membrane protein expression. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays convetein/membrane chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane cc used to study the expression and function of secretory proteins/membrane cc polypeptides and their role in metabolism. The polypeptides may be used converted to down regulate expression and antiponists against them and in assays to converte to down regulate expression and activity. The antibodies and antagonists may also be used as diagnostic agents for detecting the presence of the cc polypeptides in samples (e.g. by enzyme linked immunosorbant assay converted as disposite of diseases which may be treated include rheumatoid arthritis and diabetes.
                                                                    Matches

                                                                                                                                                      The invention relates to nucleic acid sequences that encode heparanase enzymes having endoglucuronidase activity. Recombinant heparanases are capable of removing the HS side chain from heparan sulfate proteoglycan (HSPG). Sulfated oligosaccharides, sulphonates or HSPG can be used to inhibit heparanase, this is useful for treatment of a physiological or medical condition associated with elevated heparanase activity, such as metastasis, angiogenesis, wound healing, angioplasty-induced restenosis, arteriosclerosis, atherosclerosis and inflammation. The human, murine and rat heparanases can be used to enhance wound healing, especially associated with tissue development and repair. The conditions mentioned above can be diagnosed using specific antibodies, and also using primers and probes specific for the heparanase polynucleotides. Other uses of the heparanases include sequencing sulfated molecules such as HSPG.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Heparanase; endoglucuronidase; heparan sulfate proteoglycan; enzyme; metastasis; angiogenesis; wound healing; angioplasty-induced resteno arteriosclerosis; atherosclerosis; inflammation; tissue development;
